About this Document

This section describes the content reflected in this document, including:

- [Release Notes information](#)
- [Intended audience](#)
- [Business Copy documentation](#)
- [Business Copy product updates](#)

Release Notes information

All Release Notes information is covered in the [Known issues, resolutions, and additional information](#) section.

Intended audience

This document is intended for customers and HP authorized service providers.

Business Copy documentation

BC documents are distributed using a BC documentation CD and by a Web download from the BC product page website: <http://h18000.www1.hp.com/products/storage/software/bizcopyeva/index.html>. Refer to the *HP StorageWorks Business Copy EVA/MA/EMA 2.3 Getting Started Guide* (AA–RVHPA–TE) for a list of BC-related documents and part numbers.

Business Copy product updates

BC product updates, if available, are located at the BC software and drivers page website: <http://h18000.www1.hp.com/products/storage/software/bizcopyeva/index.html>.

Known issues, resolutions, and additional information

Volume group (VG) replication may not create the expected target VG filename

Applies to: Replicating VGs on the same source host or on a different host (other than source host)

Description: When replicating Logical Storage Manager (LSM) VGs (AdvFS based on LSM), containing few unmounted filesets, with the RAW SINGLE option, the job successfully creates a target VG but without appending the expected BCV tag. For example, instead of the target VG filename being appended with “_BCV” as expected, the resulting filename:

- Is appended with “.1” when replicating on the same host.
- Remains the same name as the source VG when replicating on a different host.

Resolution: Consider using the RAW ALL option instead of the RAW SINGLE option.

VG replication may fail because of “volclonedg” utility

Description: When replicating LSM VG (AdvFS based on LSM) using the SNAP MOUNT operation, BC jobs occasionally fail at the MOUNT operation due to “volclonedg” (a Tru64 OS utility).

Resolution: First undo the job, then reboot the BC-enabled host. This action typically fixes the “volclonedg” problem. If the problem persists, then reinitialize the LSM on the target host.
